

Question:

The feedback loop in men which regulates the production of sex hormones includes all but which of the following?

Answer Choices:

- A. follicle-stimulating hormone
- B. oxytocin
- C. pituitary gland
- D. hypothalamus
- E. gonadotropin-releasing hormone
- F. luteinizing hormone
- G. testosterone

Reasoning + Answer:

<think>
The feedback loop in men that regulates the production of sex hormones primarily involves the hypothalamus, pituitary gland, and gonadotropin-releasing hormone (GnRH). The hypothalamus secretes GnRH, which stimulates the pituitary gland to release luteinizing hormone (LH) and follicle-stimulating hormone (FSH). LH and FSH then regulate the production of testosterone and other sex hormones by the testes. Oxytocin is involved in social bonding and childbirth, not directly in the regulation of sex hormone production. Testosterone is one of the sex hormones produced in response to LH and FSH stimulation. Therefore, the correct answer is B. oxytocin
