

Question:
At birth, the least developed part of the brain is the

Answer Choices:

- A. visual system
- B. thalamus
- C. frontal lobe
- D. brain stem
- E. parietal lobe
- F. cerebellum
- G. cortex
- H. basal ganglia
- I. hypothalamus
- J. limbic system

Reasoning + Answer:

<think>
the brain development process starts from the brain stem , which is the oldest part of the brain .
the brain stem is responsible for controlling basic functions like breathing , heart rate , and blood pressure .
the cortex , which is the outer layer of the brain , is the last to develop .
the other parts of the brain , such as the thalamus , hypothalamus , and limbic system , develop at different rates but are generally more developed at birth than the cortex .
the frontal lobe and parietal lobe are also more developed at birth , but the cortex as a whole is still immature .
the cerebellum and basal ganglia are also developed at birth , but the cortex is the least developed part .
considering the development process and the functions of each part , the cortex is the least developed part of the brain at birth .
