

Question:
At birth, the least developed part of the brain is the

Answer Choices:

- A. visual system
- B. thalamus
- C. frontal lobe
- D. brain stem
- E. parietal lobe
- F. cerebellum
- G. cortex
- H. basal ganglia
- I. hypothalamus
- J. limbic system

Reasoning + Answer:

<think>

the brain develops in a hierarchical manner , with the lower brain structures developing before the higher brain structures .

the brain stem is responsible for controlling basic functions such as breathing , heart rate , and blood pressure , and it is the first part of the brain to develop .

the brain stem is relatively mature at birth , and it is responsible for controlling the body's automatic functions .

the other options , such as the cortex , thalamus , and limbic system , are higher brain structures that develop later in childhood and adolescence .

the visual system is also a higher brain structure that develops later in childhood .

the other options , such as the parietal lobe , cerebellum , and basal ganglia , are also higher brain structures that develop later in childhood .

the hypothalamus is a higher brain structure that develops later in childhood .

the limbic system is a higher brain structure that develops later in childhood .

the frontal lobe is a higher brain structure that develops later in adolescence .

considering the developmental timeline of the brain , the least developed part of the brain at birth is the frontal lobe .

</think><answer> C . frontal lobe </answer>
