

Question:
At birth, the least developed part of the brain is the

Answer Choices:

- A. visual system
- B. thalamus
- C. frontal lobe
- D. brain stem
- E. parietal lobe
- F. cerebellum
- G. cortex
- H. basal ganglia
- I. hypothalamus
- J. limbic system

Reasoning + Answer:

<think>

1 . At birth , the human brain is still in its early stages of development .

2 . The brain parts that are responsible for movement , balance , and breathing are essential for immediate survival .

3 . These areas are typically more developed at birth compared to others .

4 . The brain stem , which controls these functions , is one of the earliest developed parts of the brain .

5 . Therefore , it is likely that the least developed part of the brain at birth is the one that is not essential for immediate survival .

6 . This eliminates the brain stem and other areas responsible for basic functions .

7 . The remaining options , such as the visual system , frontal lobe , and others , are more developed at birth but still in their early stages .

8 . However , considering the overall development and importance of the brain parts , the least developed part at birth would likely be one of the higher-level cognitive areas .

9 . Among the options , the frontal lobe is responsible for executive functions , decision-making , and complex behaviors , which are less developed at birth compared to other areas .

10 . Therefore , the frontal lobe is likely the least developed part of the brain at birth .

</think><answer> C . frontal lobe </answer>
