

Question:

In research study, a mother and her infant are alone in a room. A stranger enters and the mother leaves the room. When the mother returns to the room, the infant begins to cry and initially continues to do so even after being picked up by the mother. Eventually the infant settles down and returns to playing, apparently happily, with the toys provided. Which attachment classification is most likely to be appropriate for this infant

Answer Choices:

- A. Anxious avoidant
- B. Disorganized
- C. Disoriented
- D. Ambivalent
- E. Dependent
- F. Attachment disorder
- G. Fearful avoidant
- H. Avoidant
- I. Anxious resistant
- J. Secure

Reasoning + Answer:

<think> The infant's behavior suggests a secure attachment classification . This is because the infant initially reacts to the stranger with distress , but upon being comfort ed by the mother , the infant is able to calm down and return to play . This indicates that the infant is able to regulate their emotions and respond to their caregiver's comfort , which is a hallmark of secure attachment . </think><answer> J . Secure </answer>
