

Question:

Which of the following factors is associated with a decreased risk of Alzheimer's?

Answer Choices:

- A. Being African or Hispanic American
- B. A lower level of education
- C. Living in a city
- D. Being married
- E. Having a family history of Alzheimer's
- F. High intake of saturated fats
- G. Older age
- H. Eating fish
- I. Being a smoker
- J. Drinking alcohol regularly

Reasoning + Answer:

<think> Being African or Hispanic American , a lower level of education , living in a city , having a family history of Alzheimer's , being a smoker , and drinking alcohol regularly are all factors that increase the risk of Alzheimer's . Being married , eating fish , and older age are factors that may decrease the risk of Alzheimer's . Eating fish is a healthy dietary choice that can provide omega - 3 fatty acids , which may protect the brain . </think>
<answer> H . Eating fish </answer>
