

Question:

The feedback loop in men which regulates the production of sex hormones includes all but which of the following?

Answer Choices:

- A. follicle-stimulating hormone
- B. oxytocin
- C. pituitary gland
- D. hypothalamus
- E. gonadotropin-releasing hormone
- F. luteinizing hormone
- G. testosterone

Reasoning + Answer:

<think>The feedback loop that regulates the production of sex hormones in men involves the hypothalamus, pituitary gland, and gonads (testes). The hypothalamus releases gonadotropin-releasing hormone (GnRH), which stimulates the pituitary gland to release luteinizing hormone (LH) and follicle-stimulating hormone (FSH). These hormones then stimulate the testes to produce testosterone. Oxytocin is not involved in the feedback loop that regulates the production of sex hormones in men.</think>
<answer>B</answer>
