

Question:

Which of the following factors is associated with a decreased risk of Alzheimer's?

Answer Choices:

- A. Being African or Hispanic American
- B. A lower level of education
- C. Living in a city
- D. Being married
- E. Having a family history of Alzheimer's
- F. High intake of saturated fats
- G. Older age
- H. Eating fish
- I. Being a smoker
- J. Drinking alcohol regularly

Reasoning + Answer:

<think>

- Being African or Hispanic American , lower education , living in a city , and having a family history of Alzheimer's are all risk factors for Alzheimer's disease .
- High intake of saturated fats is not associated with a decreased risk but is linked to increased cardiovascular and metabolic risk factors .
- Older age is a risk factor for Alzheimer's .
- Eating fish is associated with a decreased risk of Alzheimer's due to omega - 3 fatty acids .
- Smoking and drinking alcohol are risk factors for Alzheimer's .

</think>< answer>H </answer>
