

Question:

At birth, the least developed part of the brain is the

Answer Choices:

- A. visual system
- B. thalamus
- C. frontal lobe
- D. brain stem
- E. parietal lobe
- F. cerebellum
- G. cortex
- H. basal ganglia
- I. hypothalamus
- J. limbic system

Reasoning + Answer:

<think>

- The question is asking about the least developed part of the brain at birth .

- The brain develops in a cephalocaudal and rostrocaudal fashion , meaning it develops from the brain stem to the cerebrum and from the front to the back .

- The brain stem is the first part to develop , followed by the cerebellum , then the basal ganglia , and finally the cortex and other higher brain regions .

- At birth , the brain stem and cerebellum are more developed than the cortex and other higher brain regions .

- The least developed part would be the cortex , which is responsible for higher functions like perception , thought , and action .

Answer Choices :

- A . visual system
- B . thalamus
- C . frontal lobe
- D . brain stem
- E . parietal lobe
- F . cerebellum
- G . cortex
- H . basal ganglia
- I . hypothalamus
- J . limbic system

The least developed part of the brain at birth is the cortex .
