

Question:

Which of the following factors is associated with a decreased risk of Alzheimer's?

Answer Choices:

- A. Being African or Hispanic American
- B. A lower level of education
- C. Living in a city
- D. Being married
- E. Having a family history of Alzheimer's
- F. High intake of saturated fats
- G. Older age
- H. Eating fish
- I. Being a smoker
- J. Drinking alcohol regularly

Reasoning + Answer:

<think>

- Being African or Hispanic American , living in a city , and having a family history of Alzheimer's are all risk factors for the disease .
- A lower level of education and older age are also risk factors .
- High intake of saturated fats and being a smoker are associated with an increased risk of Alzheimer's .
- Drinking alcohol regularly is not definitively linked to an increased risk of Alzheimer's , but it is not protective either .
- Being married and eating fish are often associated with a decreased risk of Alzheimer's .

</think>

<answer>D . Being married </answer>
