

Question:

Which of the following factors is associated with a decreased risk of Alzheimer's?

Answer Choices:

- A. Being African or Hispanic American
- B. A lower level of education
- C. Living in a city
- D. Being married
- E. Having a family history of Alzheimer's
- F. High intake of saturated fats
- G. Older age
- H. Eating fish
- I. Being a smoker
- J. Drinking alcohol regularly

Reasoning + Answer:

<think> Factors that are associated with a decreased risk of Alzheimer's include lifestyle and health factors that promote brain health . Eating fish is associated with a lower risk of Alzheimer's disease . It is thought that omega - 3 fatty acids found in fish can help protect the brain and reduce the risk of cognitive decline .

</think><answer> H . Eating fish </answer>
