

Question:

Kylar went to the store to buy glasses for his new apartment. One glass costs \$5, but every second glass costs only 60% of the price. Kylar wants to buy 16 glasses. How much does he need to pay for them?

Reasoning + Answer:

`<think>` He gets 16 glasses so $16 / 2 = 8$ of those are full price and 8 are $5 * 0.6 = 3$. He pays $5 * 8 = 40$ and $3 * 8 = 24$ so $40 + 24 = 64$. The answer is 64. `</think>`
`<answer>` 64 `</answer>`
