

Question:

Carla is downloading a 200 GB file. Normally she can download 2 GB/minute, but 40% of the way through the download, Windows forces a restart to install updates, which takes 20 minutes. Then Carla has to restart the download from the beginning. How long does it take to download the file?

Reasoning + Answer:

`<think>` She downloads 2 gb/min, so $200 / 2 = 100$ minutes to download no breaks. but she does that for 40 % of the time so $100 / (40 * .01) = 250$ minutes. Then the computer restarts and she starts over so that is an additional 20 minutes. so $250 + 20 = 270$ minutes. The answer is 270. `</think>`
`<answer>` 270 `</answer>`
