

Question:

A bakery produces 60 loaves of bread each day. Two-thirds of the loaves are sold in the morning and half of what is left is sold equally in the afternoon and evening. How many loaves of bread are sold in the afternoon?

Reasoning + Answer:

<think>

The bakery produces 60 loaves of bread each day .

Two-thirds are sold in the morning , so $2 / 3 * 60 = 40$ loaves are sold in the morning .

$60 - 40 = 20$ loaves left over after the morning sales .

Half of the 20 remaining loaves are sold in the afternoon .

$1 / 2 * 20 = 10$ loaves are sold in the afternoon .

The bakery sells 10 loaves of bread in the afternoon .

</think>

< answer >

The bakery sells 10 loaves of bread in the afternoon .

</answer>
