

Question:

Carla is downloading a 200 GB file. Normally she can download 2 GB/minute, but 40% of the way through the download, Windows forces a restart to install updates, which takes 20 minutes. Then Carla has to restart the download from the beginning. How long does it take to download the file?

Reasoning + Answer:

<think>
Carla is downloading a 200 GB file
So , her normal download speed is 2 GB / minute
This means , to download 200 GB , it will take her $200 / 2 = 100$ minutes
Now , 40 % of the way through the download , Windows forces a restart to install updates , which takes 20 minutes
So , total time taken so far is 40 % of 100 minutes which is $(40 / 100) * 100 = 40$ minutes
Plus the 20 minutes for the restart
Total time taken so far is $40 + 20 = 60$ minutes
Now , Carla has to restart the download from the beginning
So , now she has to cover the entire 200 GB again
This will take her another 100 minutes
Total time taken to download the file is $60 + 100 = 160$ minutes
Therefore , it takes 160 minutes to download the file </think> < answer > 160 </answer>
