

Question:

James decides to run 3 sprints 3 times a week. He runs 60 meters each sprint. How many total meters does he run a week?

Reasoning + Answer:

<think>
James decides to run 3 sprints 3 times a week
So , he will run 3 sprints 3 times a week
Number of sprints in a week is 3
He runs 60 meters each sprint
So , total meters run in one sprint is 60
Total meters run in 3 sprints is $60 * 3 = 180$
Therefore , total meters he runs in a week is 180
</think> <answer> 180 </answer>
