

**Question:**

Eliza's rate per hour for the first 40 hours she works each week is \$10. She also receives an overtime pay of 1.2 times her regular hourly rate. If Eliza worked for 45 hours this week, how much are her earnings for this week?

**Reasoning + Answer:**

<think>  
First, we first find out her earnings for the first 40 hours ,  
 $40 \text{ hours} * 10 \text{ per hour} = 400$  ,  
Now , find out her earnings for the remaining 5 hours ,  
 $5 \text{ hours} * 10 \text{ per hour} * 1.2 = 60$  ,  
Now , add both the amounts ,  
 $400 + 60 = 460$  ,  
</think> <answer> 460 </answer>
