

Question:

Every day, Wendi feeds each of her chickens three cups of mixed chicken feed, containing seeds, mealworms and vegetables to help keep them healthy. She gives the chickens their feed in three separate meals. In the morning, she gives her flock of chickens 15 cups of feed. In the afternoon, she gives her chickens another 25 cups of feed. How many cups of feed does she need to give her chickens in the final meal of the day if the size of Wendi's flock is 20 chickens?

Reasoning + Answer:

<think>
First , me need to find out the total number of cups of feed the chickens get in a day ,
Morning feed = 15 cups ,
After noon feed = 25 cups ,
Total feed so far = 15 + 25 = 40 cups ,
If the flock has 20 chickens , then total feed they would get in a day = 40 cups ,
So , in the final meal , Wendi needs to give = 3 - 1 = 2 cups ,
</think> <answer>2 </answer>
