

Question:

Carla is downloading a 200 GB file. Normally she can download 2 GB/minute, but 40% of the way through the download, Windows forces a restart to install updates, which takes 20 minutes. Then Carla has to restart the download from the beginning. How long does it take to download the file?

Reasoning + Answer:

<think>
First, I will find out how much time is required to download 200 GB in 4 parts ,
Since , Carla can download 2 GB / minute ,
So , time required to download 200 GB = $200 / 2 = 100$ minutes ,
Now , time taken for the first 40 % of the file = $40 / 100 * 100 = 40$ minutes ,
After this , I have to add the time taken for the restart ,
So , total time taken so far = $40 + 20 = 60$ minutes ,
Now , I have to find out the time required to download the remaining 60 % of the file ,
So , time taken to download remaining 60 % of the file = $60 / 100 * 100 = 60$ minutes ,
Total time taken to download the entire file = $60 + 60 = 120$ minutes ,
</think> <answer> 120 </answer>
