

Question:

A new program had 60 downloads in the first month. The number of downloads in the second month was three times as many as the downloads in the first month, but then reduced by 30% in the third month. How many downloads did the program have total over the three months?

Reasoning + Answer:

<think>
First, we find out total downloads in second month,
Three times the downloads in first month, so, $3 * 60 = 180$,
Now, I will reduce 30% of 180,
 $30\% \text{ of } 180 = (30 / 100) * 180 = 0.3 * 180 = 54$,
So, downloads in second month after reduction $= 180 - 54 = 126$,
Now, I will find the total downloads over three months,
Total = downloads in first month + downloads in second month,
 $= 60 + 126 = 186$,
</think> <answer> 186 </answer>
