

Question:

Kylar went to the store to buy glasses for his new apartment. One glass costs \$5, but every second glass costs only 60% of the price. Kylar wants to buy 16 glasses. How much does he need to pay for them?

Reasoning + Answer:

<think>
He pays 5 for 1 glass
He pays $5 * 0.6 = 3$ for the second glass
So 2nd and 3rd he pays $3 * 2 = 6$
So he pays $5 + 3 + 6 = 14$
He has 10 more to buy
 $10 * 5 = 50$
He will pay $14 + 50 = 64$
<answer>64</answer>
