

Question:

Janet’s ducks lay 16 eggs per day. She eats three for breakfast every morning and bakes muffins for her friends every day with four. She sells the remainder at the farmers' market daily for \$2 per fresh duck egg. How much in dollars does she make every day at the farmers' market?

Reasoning + Answer:

<think>

To determine how much Janet makes at the farmers ' market , we need to first calculate the total number of eggs laid by the ducks in a day and then subtract the eggs used for breakfast and baking . Janet's ducks lay 16 eggs per day . She eats 3 eggs for breakfast every morning , so the remaining eggs for other uses are $16 - 3 = 13$ eggs . Since she bakes muffins with 4 eggs , the number of eggs left for sale is $13 - 4 = 9$ eggs . Given that she sells each egg for \$ 2 , the total amount of money she makes in a day at the farmers ' market is $9 * 2 = 18$ dollars .

</think>< answer > 18 </answer>
