

Question:

Josh decides to try flipping a house. He buys a house for \$80,000 and then puts in \$50,000 in repairs. This increased the value of the house by 150%. How much profit did he make?

Reasoning + Answer:

<think>

To determine Josh's profit, we need to first calculate the new value of the house after the repairs. The original price of the house was \$80,000, and the \$50,000 in repairs increased this value by 150%. To find the amount by which the value increased, we can calculate 150% of \$80,000, which is $1.5 * \$80,000 = \$120,000$. So, the new value of the house is $\$80,000 + \$120,000 = \$200,000$. To find the profit, we subtract the original cost from the new value: $\$200,000 - \$80,000 - \$50,000 = \$70,000$.

</think><answer>70000</answer>
