

Question:

Janet's ducks lay 16 eggs per day. She eats three for breakfast every morning and bakes muffins for her friends every day with four. She sells the remainder at the farmers' market daily for \$2 per fresh duck egg. How much in dollars does she make every day at the farmers' market?

Reasoning + Answer:

<think>

To determine how much Janet makes at the farmers' market, we need to first calculate the total number of eggs laid by the ducks in a day and then subtract the eggs used by Janet. The ducks lay 16 eggs per day, and Janet eats 3 eggs for breakfast, so the remaining eggs for baking and selling are $16 - 3 = 13$ eggs. Since she sells each egg for \$2, the amount of money she makes from selling the eggs is $13 * 2 = 26$ dollars.

</think><answer>26</answer>
