

Question:

Kylar went to the store to buy glasses for his new apartment. One glass costs \$5, but every second glass costs only 60% of the price. Kylar wants to buy 16 glasses. How much does he need to pay for them?

Reasoning + Answer:

one glass <think> 5 </think> <answer> 5 </answer> , second glass <think> $5 * 0.6$ </think> <answer> 3 </answer> , two glasses <think> $5 + 3$ </think> <answer> 8 </answer> . $16 / 2 =$ <think> $16 / 2$ </think> <answer> 8 </answer> all glasses <think> $8 * 8$ </think> <answer> 64 </answer> <think> >
