

Question:

James decides to run 3 sprints 3 times a week. He runs 60 meters each sprint. How many total meters does he run a week?

Reasoning + Answer:

<think> he runs 3 sprints = $3 * 60 =$ << $3 * 60 = 180$ >> 180 meters

so he runs 180 meters /a/day

he does this 3 times a week = $180 * 3 =$ << $180 * 3 = 540$ >> 540

so he runs 540 meters in a week

</think> <answer> 540 </answer>
