

Question:

Every day, Wendi feeds each of her chickens three cups of mixed chicken feed, containing seeds, mealworms and vegetables to help keep them healthy. She gives the chickens their feed in three separate meals. In the morning, she gives her flock of chickens 15 cups of feed. In the afternoon, she gives her chickens another 25 cups of feed. How many cups of feed does she need to give her chickens in the final meal of the day if the size of Wendi's flock is 20 chickens?

Reasoning + Answer:

<think> in morning he gave 15 cups .so after noon he gave 25 cups .so he gave $15 + 25 = 40$ cups in 2 meals
he has 20 chickens .so he gives each 3 cups $= 20 * 3 = 60$ cups in a day
he already gave 40 cups .so he has $60 - 40 = 20$ cups left for then ight
so he gives 20 cups in then ight meal
</think><answer> 20 </answer>
