

Question:

Kylar went to the store to buy glasses for his new apartment. One glass costs \$5, but every second glass costs only 60% of the price. Kylar wants to buy 16 glasses. How much does he need to pay for them?

Reasoning + Answer:

<think> one glass = 5
second glass = $5 * 0.6 = 3$
so one = 5 , second = 3 , he bought = 16
he has = $16 / 2 = 8$ second glasses
he has = $8 * 3 = 24$
he has = $16 - 8 = 8$ one glass
he has = $8 * 5 = 40$
so he pay = $24 + 40 = 64$
so he pay = 64
</think><answer> 64 </answer>
