

Question:

Kylar went to the store to buy glasses for his new apartment. One glass costs \$5, but every second glass costs only 60% of the price. Kylar wants to buy 16 glasses. How much does he need to pay for them?

Reasoning + Answer:

<think> one glass = 5 , second glass = 5\*0.6 = <<5\*0.6 = 3 >> 3

he wants 16 glasses , he has 1 glasses at 5 = <<5 = 5 >> 5

he has 2 glasses at 3 = 2\*3 = <<2\*3 = 6 >> 6

so he has 5 + 6 = <<5 + 6 = 11 >> 11

so he paid = 11

so he pay = 11

he has 11 = <<11 = 11 >> 11
