

Question:

Josh decides to try flipping a house. He buys a house for \$80,000 and then puts in \$50,000 in repairs. This increased the value of the house by 150%. How much profit did he make?

Reasoning + Answer:

`<think>` Josh buys a house for 800 00 dollars , and then he puts in 500 00 dollars in repairs , so the total cost for him is $800\,00 + 500\,00 = 130\,000$ dollars , the value of the house increased by 150 % after the repairs , so the new value of the house is $800\,00 + 150 / 100 * 800\,00 = 200\,000$, the profit he made is the difference between the new value of the house and the total cost , so the profit is $200\,000 - 130\,000 = 700\,00$ `</think>` `<answer>` 700 00 `</answer>`
