

## Question:

Josh decides to try flipping a house. He buys a house for \$80,000 and then puts in \$50,000 in repairs. This increased the value of the house by 150%. How much profit did he make?

## Reasoning + Answer:

<think> he bought the house for 800 00 dollars , and then he put in 500 00 dollars in repairs , so the total amount of money he invested is  $800\,00 + 500\,00 = 130\,000$  dollars , the repairs increased the value of the house by 150 % , so the value of the house after repairs is  $800\,00 * 150 / 100 = 120\,000$  , the profit he made is the difference between the value of the house after repairs and the total amount of money he invested , so the profit is  $120\,000 - 130\,000 = -100\,00$  </think> <answer> -100 00 </answer>
