

Question:

Carla is downloading a 200 GB file. Normally she can download 2 GB/minute, but 40% of the way through the download, Windows forces a restart to install updates, which takes 20 minutes. Then Carla has to restart the download from the beginning. How long does it take to download the file?

Reasoning + Answer:

<think> carla is downloading a 200 GB file , and she can download 2 GB / minute , so the normal time it would take to download the file is $200 / 2 = 100$ minutes , but at 40 % of the way through the download , windows forces a restart to install updates , which takes 20 minutes , so carla has to restart the download from the beginning , so she will again download 200 GB in 100 minutes , adding the 20 minutes for the restart , the total time it takes to download the file is $100 + 20 = 120$ </think> <answer> 120 </answer>
