

Question:

Carla is downloading a 200 GB file. Normally she can download 2 GB/minute, but 40% of the way through the download, Windows forces a restart to install updates, which takes 20 minutes. Then Carla has to restart the download from the beginning. How long does it take to download the file?

Reasoning + Answer:

<think she downloads 2 gb in 1 minute, so the normal time taken to download 200 gb is $200 / 2 = 100$ minutes, she downloads 40% of 200 gb in 40 minutes, which is 80 gb, so the remaining 160 gb has to be downloaded, so the time taken to download the remaining 160 gb is $160 / 2 = 80$ minutes, so the total time taken is $100 + 40 + 20 = 160$ </think><answer> 160 </answer>
