

Question:

James decides to run 3 sprints 3 times a week. He runs 60 meters each sprint. How many total meters does he run a week?

Reasoning + Answer:

<think James is running 3 sprints in a day, so the total number of sprints in a week is $3 * 7 = 21$, and each sprint is of 60 meters, so the total distance covered in a week is $21 * 60 = 1260$ </think><answer>1260 </answer>
