

Question:

Carla is downloading a 200 GB file. Normally she can download 2 GB/minute, but 40% of the way through the download, Windows forces a restart to install updates, which takes 20 minutes. Then Carla has to restart the download from the beginning. How long does it take to download the file?

Reasoning + Answer:

<think if she can download 2 gb in 1 minute, then the time taken to download 200 gb is $200 / 2 = 100$ minutes, but windows forces a restart at 40% of the download, so the work done in 40% of 100 minutes is 40, so she has to again start the download from the beginning, so the total time taken is $100 + 100 = 200$ minutes </think><answer>200</answer>
