

Question:

John drives for 3 hours at a speed of 60 mph and then turns around because he realizes he forgot something very important at home. He tries to get home in 4 hours but spends the first 2 hours in standstill traffic. He spends the next half-hour driving at a speed of 30mph, before being able to drive the remaining time of the 4 hours going at 80 mph. How far is he from home at the end of those 4 hours?

Reasoning + Answer:

<think john covers a distance of $60 * 3 = 180$ miles while going to the place where he turns around , so when he turns around , the distance from his home is also 180 miles , so in the next 4 hours , he will cover a distance of 2 hours (0 distance covered in stand still traffic) + $0.5 * 30 = 15$ and 2 hours at 80 = 160 , so total distance covered in 4 hours is $15 + 160 = 175$, now distance from home is $180 - 175 = 5$
</think><answer>5</answer>
