

Question:

Kylar went to the store to buy glasses for his new apartment. One glass costs \$5, but every second glass costs only 60% of the price. Kylar wants to buy 16 glasses. How much does he need to pay for them?

Reasoning + Answer:

<think>
first , he buys 8 glasses that cost 5 dollars , so he pays $8 * 5 = 40$ dollars
then , he buys 8 glasses that cost $5 * 0.6 = 3$ dollars , so he pays $8 * 3 = 24$ dollars
so he needs to pay $40 + 24 = 64$ dollars
</think>
< answer >
64
</answer>
