

Question:

Kylar went to the store to buy glasses for his new apartment. One glass costs \$5, but every second glass costs only 60% of the price. Kylar wants to buy 16 glasses. How much does he need to pay for them?

Reasoning + Answer:

<think>
he needs to buy $16 / 2 = 8$ glasses at full price ,and 8 glasses at 60 % price
so he needs $8 * 5 + 8 * 5 * 0.6 = 68$ dollars
</think>
<answer>
68
</answer>
