

Question:

John drives for 3 hours at a speed of 60 mph and then turns around because he realizes he forgot something very important at home. He tries to get home in 4 hours but spends the first 2 hours in standstill traffic. He spends the next half-hour driving at a speed of 30mph, before being able to drive the remaining time of the 4 hours going at 80 mph. How far is he from home at the end of those 4 hours?

Reasoning + Answer:

<think>
he drives $3 * 60 = 180$ miles away from home
he spends 2 hours in traffic
he drives $0.5 * 30 = 15$ miles in 0.5 hours
he drives $3 * 80 = 240$ miles in 3 hours
so he drives $180 + 15 + 240 = 395$ miles
</think>
<answer>
395
</answer>
