

Question:

A basket contains 25 oranges among which 1 is bad, 20% are unripe, 2 are sour and the rest are good.
How many oranges are good?

Reasoning + Answer:

10

think: among 25 oranges, 1 is bad and 20% are unripe, we have $25 * 20\% = 5$ are unripe, so $25 - 1 - 5 = 19$ are not bad and not unripe. $19 - 2 = 17$ are good. </think><answer>17</answer>
