

Question:

Janet’s ducks lay 16 eggs per day. She eats three for breakfast every morning and bakes muffins for her friends every day with four. She sells the remainder at the farmers' market daily for \$2 per fresh duck egg. How much in dollars does she make every day at the farmers' market?

Reasoning + Answer:

<think so first you need to find out how many eggs are laid in total .

so you do 16 eggs per day .

since she eats 3 for breakfast .

so you do 16 - 3 because she eats 3 .

so 16 - 3 = 13 .

so now she has 13 eggs left .

she also makes 4 muffins so those aren't eggs .

so you do 13 - 4 because she has 4 eggs for muffins .

so 13 - 4 = 9 .

so now she has 9 eggs left to sell .

so now you know she sells them for 2 dollars an egg .

so you do 9 * 2 cause she sells them 2 dollars each .

so 9 * 2 = 18 .

so the answer is 18 .

so i think she makes 18 dollars every day at the market . so i 'll say the answer is 18 . so i think the answer is 18 . so i 'll write it in the answer format .

so i answer is 18 . so i 'll write it like this .

so the answer is < answer > 18 </answer >
