

Question:

James decides to run 3 sprints 3 times a week. He runs 60 meters each sprint. How many total meters does he run a week?

Reasoning + Answer:

<think so first you need to find out how many meters he runs in one session .

so you do $3 * 60$ cause he does 3 sprints and each is 60 meters .

so $3 * 60 = 180$.

so he runs 180 meters in one session .

now you do this for 3 sessions cause he says he does it 3 times a week .

so $180 * 3$.

so $180 * 3 = 540$.

so i did 180 cause that's how many he ran in one session and i did the same for the 3 .

so the answer is 540 .

so i did $180 * 3$ to get 540 .

so i did think $180 * 3 = 540$.

so i think the answer is 540 meters . so i 'll put the answer as 540 .

so i think the answer is 540 . so i 'll put it in answer format .

so i think the answer is <answer> 540 </answer> meters .
