

Question:

In a dance class of 20 students, 20% enrolled in contemporary dance, 25% of the remaining enrolled in jazz dance, and the rest enrolled in hip-hop dance. What percentage of the entire students enrolled in hip-hop dance?

Reasoning + Answer:

<think so first you need to find out how many students are in contemporary dance .

so you do $20 * 20 / 100$ cause it's 20%.

so $20 * 20 / 100 = 4$.

so 4 students are in contemporary dance .

now you do $20 - 4$ cause they removed those 4 from the total .

so $20 - 4 = 16$.

so now you know 16 is left .

now you do the same for jazz dance but with 25 % of 16 .

so $16 * 25 / 100$.

so $16 * 25 / 100 = 4$.

so now you did $16 * 0.25$ cause $25 / 100$ is 0.25 .

so you have 4 students in jazz dance .

so now you do 16 because that was the remaining and you minus 4 for jazz .

so $16 - 4 = 12$.

so the remaining students that did hip-hop is 12 .

so now to find out the percentage you do $12 / 20 * 100$ cause there are 20 students total .

so the answer is $12 / 20 * 100 = 60$.

so the percentage of students that did hip-hop is 60%. so i did $12 / 20$ cause im finding the fraction of hip-hop students and then i multiplied by 100 to convert it to percentage . so the answer is 60%. so i think the answer is 60%. so i 'll put the answer like this .

so i 'll say the answer is 60%. so i 'm 100% sure about this . so i 'll write it like this .

so the answer is < answer > 60 </answer> .
