

Question:

Jill gets paid \$20 per hour to teach and \$30 to be a cheerleading coach. If she works 50 weeks a year, 35 hours a week as a teacher and 15 hours a week as a coach, what's her annual salary?

Reasoning + Answer:

<think so first you need to calculate how many hours she worked as a teacher .

so you do $35 * 50$ because she works 35 hours a week and she works 50 weeks .

so $35 * 50 = 1750$.

so she worked 1750 hours as a teacher .

now you do the same for the cheerleading .

so $15 * 50$ cause she works 15 hours a week and 50 weeks .

so $15 * 50 = 750$.

so she worked 750 hours as cheerleading coach .

So now you need to do $1750 + 750$ for the total hours worked .

so $1750 + 750 = 2500$.

so she worked 2500 hours in total .

now since she gets 20 per hour as a teacher we do $20 * 1750$.

so $20 * 1750$ for the teacher part .

$20 * 1750 = 35000$.

and for the coach part she gets 30 per hour so $30 * 750$.

so now you do $30 * 750$ for the coach part .

$30 * 750 = 22500$.

so now you add the two together $35000 + 22500$.

$35000 + 22500 = 57500$.

so the answer is 57500 . so i did the math and the final answer is 57500 . so i think the annual salary is 57500 . so i'll put the answer in the answer tag .

so i think the answer is 57500 . so i'll write it in caps .

so the answer is < answer > 57500 </answer> .
