

Question:

Janet’s ducks lay 16 eggs per day. She eats three for breakfast every morning and bakes muffins for her friends every day with four. She sells the remainder at the farmers' market daily for \$2 per fresh duck egg. How much in dollars does she make every day at the farmers' market?

Reasoning + Answer:

<think so first you need to find out how many eggs are remaining .

so you do 16 (the total eggs) - 3 (because she eats 3)

so 16 - 3 = 13

so she has 13 eggs left .

now since she sells them at 2 dollars for each egg .

so you do 13 * 2 .

so 13 * 2 = 26 .

so i think the answer is 26 .

so i did the think 26 is the answer because you multiply the remaining eggs by 2 cause that's how much she sells each egg for . so i 'm going to say .

so i 'll do think 26 .

so the answer is 26 .

so i 'll put the answer here .

so the answer is 26 .
