

**Question:**

In a dance class of 20 students, 20% enrolled in contemporary dance, 25% of the remaining enrolled in jazz dance, and the rest enrolled in hip-hop dance. What percentage of the entire students enrolled in hip-hop dance?

**Reasoning + Answer:**

<think so first you need to find out how many students are in contemporary dance .

so you do  $20 * 20 / 100$  cause it's 20%.

so  $20 * 20 / 100 = 4$  .

so 4 students are in contemporary dance .

now you do  $20 - 4$  cause they told you 20% did contemporary .

so  $20 - 4 = 16$  .

so 16 is the new total students .

now you do 25 % of 16 because 25 % of the remaining did jazz .

so  $16 * 25 / 100$  .

so  $16 * 25 / 100 = 4$  .

so 4 students did jazz .

so now you do 16 because that's the remaining and you minus 4 for jazz .

so  $16 - 4 = 12$  .

so 12 is the number of students in hip-hop .

so now you need to find what percentage 12 is of 16 cause that's the 100%.

so you do  $12 * 100 / 16$  .

so  $12 * 100 / 16 = 75$  .

so the answer is 12 students which is 75 % of the total students . so i said this because we found 12 out of 16 students so we do  $12 / 16 * 100$  to get the percentage .

so i said the answer is 75 . so i'm saying the hip-hop dancers is 75 % of the entire students . so i'll mark 75 as my answer .

so i'm doing 75 . so the answer is 75 . so i'm putting the answer in the answer tag .

so the answer is 75 .
