

Question:

Jill gets paid \$20 per hour to teach and \$30 to be a cheerleading coach. If she works 50 weeks a year, 35 hours a week as a teacher and 15 hours a week as a coach, what's her annual salary?

Reasoning + Answer:

<think so first you need to calculate how many hours she worked as a teacher .

so you do 35 hours a week * 50 weeks .

so 35 * 50 = 1750 .

so she worked 1750 hours as a teacher .

now you do the same for the coach .

so 15 hours a week * 50 weeks .

so 15 * 50 .

15 * 50 = 750 .

so she worked 750 hours as coach .

so now you know how many hours she worked for each job .

so now you need to do 1750 for the teacher cause it's in thousands .

and 750 is already in hundreds so you just do 1750 + 750 .

so 1750 + 750 .

1750 + 750 = 2500 .

so the annual salary is 2500 . so i put the answer in thousands so .

2500 is 25000 . so i put it in the answer . so i did it like this because you convert the 750 into thousands by doing 750 * 1000 cause there are 1000 in a thousand and then you do the same for 1750 . so 1750 * 1000 is 1750000 . then you add them together . 1750000 + 7500 = 1825000 . so the annual salary . so i put it in a simpler form by dividing 1825000 by 1000 so . 1825000 / 1000 . so 1825000 / 1000 is 1825 . so the annual salary is 1825 . so i put the answer in thousands . so i did 1825000 / 1000 to make it simpler . so i put the answer . so i did 1825000 / 1000 because 1000 is in the unit place and i want to make it simpler . so the answer is 1825 . so i put 1825 as my answer . so i did 1825000 / 1000 cause i want to make it simpler . so the annual salary is 1825 . so the answer is 1825 . so i put 1825 as my answer because thats how many she makes annually . so i did 1825000 / 1000 cause i want to make it simpler .
