

Question:

Cynthia eats one serving of ice cream every night. She buys cartons of ice cream with 15 servings of ice cream per carton at a cost of \$4.00 per carton. After 60 days, how much will she spend on ice cream?

Reasoning + Answer:

To solve this problem , please follow the steps below :

<think>

1. Cynthia eats one serving of ice cream every night , so in 60 days , she will eat 60 servings of ice cream .

2. Each carton of ice cream contains 15 servings , so 60 servings will fill $60 / 15 = 4$ cartons .

3. Each carton costs \$4.00 , so 4 cartons will cost $4 * 4 = \$16.00$

Therefore , Cynthia will spend \$16.00 on ice cream .

</think>
