

Question:

Josh decides to try flipping a house. He buys a house for \$80,000 and then puts in \$50,000 in repairs. This increased the value of the house by 150%. How much profit did he make?

Reasoning + Answer:

<think>
The original value of the house is 80,000 dollars
 It increased by 150%, so the increase in value is $80,000 \times 150\% = 80,000 \times 1.5 = 120,000$ dollars
 So, the new value of the house after the increase is $80,000 + 120,000 = 200,000$ dollars
 He spent 50,000 dollars on repairs
 So, the total cost he incurred is $80,000 + 50,000 = 130,000$ dollars
 The profit he made is the difference between the new value of the house and the total cost, which is $200,000 - 130,000 = 70,000$ dollars
 </think><answer>70000</answer>
