

Question:

Josh decides to try flipping a house. He buys a house for \$80,000 and then puts in \$50,000 in repairs. This increased the value of the house by 150%. How much profit did he make?

Reasoning + Answer:

<think>

Josh buys a house for \$80,000 and puts in \$50,000 in repairs, so the total expenditure is:

$$\text{\[80,000 + 50,000 = 130,000 \text{ \texttt{\text{dollars}} \text{ \texttt{\text{]}}}}}$$

The increased value of the house is 150% of the original value of \$80,000:

$$\text{\[150\% \times 80,000 = \frac{150}{100} \times 80,000 = 120,000 \text{ \texttt{\text{dollars}} \text{ \texttt{\text{]}}}}}$$

Thus, the new value of the house is:

$$\text{\[80,000 + 120,000 = 200,000 \text{ \texttt{\text{dollars}} \text{ \texttt{\text{]}}}}}$$

The profit Josh made is the difference between the new value of the house and the total expenditure:

$$\text{\[200,000 - 130,000 = 70,000 \text{ \texttt{\text{dollars}} \text{ \texttt{\text{]}}}}}$$

<answer>70000</answer>
